

1.2. Types and Features of the Cross Roller Guide/Ball Guide

●Cross Roller Guide Model VR

A compact, highly rigid LM system whose roller cage holding precision rollers orthogonally aligned one after another travels by half the stroke on a V-shaped groove formed on a rail.

●Ball Guide Model VB

A low-friction, highly accurate LM system whose ball cage holding precision balls in short pitches travels by half the stroke on a V-shaped groove formed on a rail.
