

1. Features of the Rod End

1.1. Structure and Features of the Rod End

The Rod End is a self-aligning plain bearing that uses a spherical inner ring which has the same level of accuracy and hardness as bearing steel balls and in which only the spherical area is hard chrome plated. With the combination of a spherical inner ring whose sliding surface is mirror-finished and a rationally designed holder, the Rod End ensures play-free, extremely smooth rotary and rocking motion.
